Input File: sessionmanager_form.html
Output File: sessionmanager.php

Create a PHP Session Manager with the following functionalities:
- Get Session ID
- Set Session Data
- Get Session Data
- Delete Session Data
- Get all Session Data
- Delete all Session Data
- Destroy Session
- Delete Session Cookie
- Display Session Raw
- Session Listing Table
- Get Session Name

Button	Functionality
Get_Session_ID	A unique session Id Value is given.
Add_Session_Data	Used to add the session data given the name and value.
Get_Session_Data	Used to get the value of the given session variable
Del_Session_Data	It deletes a single session variable
Del_All_Session_Data	It deletes all session data
Display_Session_Raw	It displays all session array data in raw format.
Del_Session_Cookie	This NEW functionality to be added. It causes the Session ID to change by deleting the session cookie name.
Destroy_Session	Destroys Session
Session_Listing_Table	Display All Session Data Dynamically in table format whenever there is a session change. It also displays automatically when web page is first loaded.
Get_Session_Name	Displays the Session Name which is used as a cookie.

PHP SESSION MANAGER
